In the summer and autumn of 2006 I read several interviews with Brian May in which he mentioned his desire to complete the PhD that he had abandoned in 1974. I looked up the papers he had published while a PhD student, which were on spectroscopic studies of the motion of the dust responsible for the zodiacal light, and felt that there was a basis for a thesis. Since he had been a student at Imperial, I knew, as Head of the Astrophysics Group at Imperial, that it would be good for the Group if he came and worked with us. I got in touch with him by email and suggested he come and talk about it. He replied enthusiastically and said that he was working on typing up what he had completed by 1974. I gradually realized that I was the only staff member at Imperial who had previously worked on zodiacal dust, so that I would have to act as his supervisor. Eventually we met and I tried to assess whether he would be able to find time for the huge amount of work that finishing off a thesis involves, particularly if it has not been touched for over 30 years. Since some of Brian ' s emails were coming from the recording studio I knew there was strong competition for his time.

Hardbound. The computer-aided methods presented in this book represent recent advances in the methodology for predicting and evaluating off-road vehicle performance. The mathematical models established for vehicle-terrain systems will enable the engineering practitioner to evaluate, on a rational basis, a wide range of options and to select an appropriate vehicle configuration for a given mission and environment. The models take into account all major design and operational parameters, as well as pertinent terrain characteristics. Applications of the computer-aided engineering methods to the parametric analysis of off-road vehicle design are demonstrated through examples.

“ A definitive account . . . It ' s hard to imagine anyone better than Paul Ingrassia to ‘ ride shotgun ’ on a journey through the sometimes triumphant, often turbulent, history of U.S. automaking. . . . [A] wealth of amusing, astonishing and enlightening nuggets. ” —Pittsburgh Tribune-Review This is the epic saga of the American automobile industry ' s rise and demise, a compelling story of hubris, missed opportunities, and self-inflicted wounds that culminates with the president of the United States ushering two of Detroit ' s Big Three car companies—once proud symbols of prosperity—through bankruptcy. With unprecedented access, Pulitzer Prize winner Paul Ingrassia takes us from factory floors to small-town dealerships to Detroit ' s boardrooms to the White House. Ingrassia answers the big questions: Was Detroit ' s self-destruction inevitable? Why did Japanese automakers manage American workers better than the American companies themselves did? Complete with a new Afterword providing fresh insights into the continuing upheaval in the auto industry—the travails of Toyota, the revolving-door management and IPO at General Motors, the unexpected progress at Chrysler, and the Obama administration ' s stake in Detroit ' s recovery—Crash Course addresses a critical question: America bailed out GM, but who will bail out America? With an updated Afterword by the author Praise for Crash Course “ In order to understand just how much of a mess it was—not to mention how it got that way and how, if at all, it can be cleaned up—you really need to read Crash Course. ” —The Washinton Post “ Ingrassia tells Detroit ' s story with economy, vigour and restrained fury. ” —The Economist “ A delightful mix of history and first-person reporting . . . Employing superb storytelling skills, Ingrassia explains in head-shaking detail the elements of a wholly avoidable collision. ” —Kirkus
