Asthma in children 2014 - SlideShare

Bronchial thermoplasty is a procedure sometimes used to treat adults with severe asthma. 1 It is done to reduce the amount of smooth muscle that surrounds the airways. The procedure was approved by the US Food and Drug Administration in 2010 for people ages 18 years and older whose asthma is not well controlled with inhaled corticosteroids and long-acting beta-agonists. 2

Bronchial Thermoplasty: Severe Asthma Treatment

Asthma is a major public health problem worldwide and is associated with excess morbidity, mortality, and economic costs associated with lost productivity. 1 Guidelines for asthma were first released in the United States in 1991 by the National Heart, Lung, and Blood Institute and were most recently updated in 2007. 2 An expert panel was convened in 2018 to update the asthma guidelines.

Innovative Therapies for Severe Asthma

Background and Aim of Study: Recently, the evidence concerning clinical efficacy of Tiotropium Respimat (TIO) for bronchial asthma is accumulated. In Japan, clinical use of TIO is only allowed for COPD, not asthma yet, however, it is used for the uncontrolled severe asthmatics even with the treatment of GINA step 4 or 5 in daily clinical setting.
