The fifth Small Wars JournalEl Centro anthology spans online journal and blog writings for all of 2015 with a thematic focus on narcoterrorism and impunity in the Americas. This anthology is composed of an About SWJ and Foundation section; a memoriam to our friend and colleague, George W. Grayson; an acronym listing; a foreword; an introduction; twenty-eight chapters; a postscript; anthology notes; and notes on its twenty-three academic, governmental, and professional contributors.

This book presents pioneering research that is designed to show, from a qualitative and ethnographic perspective, how new information and communication technologies, as applied to the school system and to local governance initiatives, merely reproduce traditional pedagogical approaches and the dominant forms by which power is exercised at the local level. The studies thus constitute points of departure for further thinking about the need to promote an Internet culture based on the social application of a OC right to communication and cultureOCO and an OC Internet right, OCO that will permit the establishment of true citizen participation and free access to knowledge, with due regard to personal and individual rights such as those of privacy and intimacy."

What once seemed nearly impossible has turned into reality. The number of available Internet addresses is now nearly exhausted, due mostly to the explosion of commercial websites and entries from an expanding number of countries. This growing shortage has effectively put the Internet community--and some of its most brilliant engineers--on alert for the last decade.Their solution was to create IPv6, a new Internet standard which will ultimately replace the current and antiquated IPv4. As the new backbone of the Internet, this new protocol would fix the most difficult problems that the Internet faces today--scalability and management. And even though IPv6's implementation has met with some resistance over the past few years, all signs are now pointing to its gradual worldwide adoption in the very near future. Sooner or later, all network administrators will need to understand IPv6, and now is a good time to get started.IPv6 Network Administration offers administrators the complete inside info on IPv6. This book reveals the many benefits as well as the potential downsides of this next-generation protocol. It also shows readers exactly how to set up and administer an IPv6 network.A must-have for network administrators everywhere, IPv6 Network Administration delivers an even-handed approach to what will be the most fundamental change to the Internet since its inception. Some of the other IPv6 assets that are covered include: routing integrated auto-configuration quality-of-services (QoS) enhanced mobility end-to-end security IPv6 Network Administration explains what works, what doesn't, and most of all, what's practical when considering upgrading networks from the current protocol to IPv6.

Social inclusion/exclusion has only recently emerged in transport-related discourse. Despite the apparent absence of a transport policy framework for social inclusion/exclusion, there has been some movement towards a greater understanding of the social aspects of transport in the research sphere. This book brings together some of this research, focusing on ethnicity - an area that has, so far, had little discussion in the traditional transport literature, thereby contributing to the exploration of the interface between transport and social exclusion. In particular, it examines the contribution that demand management measures can make to the reduction of the negative impacts of road-based transport. It questions whether methods such as road user charging and work place parking can be used as instruments for social inclusion, and analyses the potential negative impacts of these schemes if sufficient attention is not paid to ethnicity issues.

Public venues are vital to information access across the globe, yet few formal studies exist of the complex ways people in developing countries use information technologies in public access places.Libraries, Telecentres, Cybercafes and Public Access to ICT: International Comparisons presents groundbreaking research on the new challenges and opportunities faced by public libraries, community telecentres, and cybercaf \u00e9 s that offer public access to computers and other information and communication technologies. Written in plain language, the book presents an in-depth analysis of the spaces that serve underserved populations, bridge "digital divides," and further social and economic development objectives, including employability. With examples and experiences from around the world, this book sheds light on a surprising and understudied facet of the digital revolution at a time when effective digital inclusion strategies are needed more than ever.

This book examines the political and developmental implications of the new information and communication technologies (NICT) in the Third World. Whereas the concept of the "digital divide" tends to focus on technological and quantitative indicators, this work stresses the crucial role played by the political regime type, the pursued development model and the specific configuration of actors and decision-making dynamics. Two starkly contrasting Third World countries, state-socialist Cuba and the Latin America's "show-case democracy" Costa Rica, were chosen for two in-depth empirical country studies.

Caribbean economies have been faced with mounting challenges arising from the increasing pace of economic globalization. The financial crisis of 2007 further exacerbated economic instability due to high foreign debt, lack of competitiveness, declining productivity, and high unemployment and underemployment. This in turn has precipitated increasing social and environmental problems, including poverty, inequality, crime and violence, and environmental degradation, all of which require new perspectives and policy approaches for transformative change and sustainable development. In this two volume multidisciplinary edited book The Modern Caribbean Economy, Volume I provides scholars and practitioners with alternative theoretical perspectives and concrete policy recommendations, while Volume II discusses economic, industrial, and social problems facing the Caribbean along with pragmatic proposals to successfully deal with these, while building local resilience and enhancing institutional strength in the region.

This book advances alternative approaches to understanding media, culture and technology in two vibrant regions of the Global South. Bringing together scholars from Africa and the Caribbean, it traverses the domains of communication theory, digital technology strategy, media practice reforms, and corporate and cultural renewal. The first section tackles research and technology with new conceptual thinking from the South. The book then looks at emerging approaches to community digital networks, online diaspora entertainment, and video gaming strategies. The volume then explores reforms in policy and professional practice, including in broadcast television, online newspapers, media philanthropy, and business news reporting. Its final section examines the role of village-based folk media, the power of popular music in political opposition, and new approaches to overcoming neo-colonial propaganda and external corporate hegemony. This book therefore engages critically with the central issues of how we communicate, produce, entertain, and build communities in 21st-century Africa and the Caribbean.
