Presenting the Proceedings of the Ergonomics Society's annual conference, the series embraces the wide range of topics covered by ergonomics. Individual papers provide insight into current practice, present new research findings and form an invaluable reference source. A wide range of topics are covered in these proceedings, including Ergonomics, Human Factors and User-Centred Design. It also features related disciplines such as Psychology, Engineering and Physiology. Particular emphasis is given to the utility of these disciplines in improving health, safety, efficiency and productivity. The 2007 Annual Conference features "Human factors at the heart of systems engineering". As well as being of interest to mainstream ergonomists and human factors specialists, Contemporary Ergonomics will appeal to all those who are concerned with the interaction of people with their working and leisure environment including designers, manufacturing and production engineers, health and safety specialists, occupational, applied and industrial psychologists and applied physiologists.

Activities for Teaching Braille More Efficiently at the Beginning Level.

Scholarly dispositions represent the practices and habits of mind that support consistent success in teaching, learning, and knowledge creation. To be successful in their undergraduate and graduate education, students must develop academic skills that transcend content knowledge, such as receiving and responding to critical feedback and learning how to collaborate, master academic writing, and be mindful of ethical research practices. Much is still unknown about how to teach dispositions, such as how to design a curriculum to best cultivate habits of mind, and this book attempts to address this gap while providing practical methods and strategies that can help higher education practitioners to cultivate and assess the scholarly dispositions of their students effectively. The Handbook of Research on Developing Students' Scholarly Dispositions in Higher Education provides insight on dispositions that students must learn in higher education and how higher education faculty can help students to develop these dispositions, as well as evidence-based methods that help develop scholarly dispositions for undergraduate and graduate education. This book provides a plethora of information on scholarly dispositions and related elements, including teaching time management, collaboration, and research ethics. It is an ideal reference source for teachers, academicians, administrators, researchers, and students aspiring to become researchers and scholars themselves.

Significantly updated in reference to the latest construction standards and evolving building types Many chapters revised including housing, transport, offices, libraries and hotels New chapter on flood-aware design Sustainable design integrated into chapters throughout Over 100,000 copies sold to successive generations of architects and designers - this book belongs in every design studio and architecture school library The Metric Handbook is the major handbook of planning and design information for architects and architecture students. Covering basic design data for all the major building types, it is the ideal starting point for any project. For each building type, the book gives the basic design requirements and all the principal dimensional data, and succinct guidance on how to use the information and what regulations the designer needs to be aware of. As well as building types, the Metric Handbook deals with broader aspects of design such as materials, acoustics and lighting, and general design data on human dimensions and space requirements. The Metric Handbook provides an invaluable resource for solving everyday design and planning problems.
