Finamore and Scott Moore ~~Efficient Crop Type Mapping Based~~

Remote sensing offers an efficient and reliable means to map crop types and areas. In previous attempts, sensor platform and image resolution vary depending on cost, processing time, data availability and study area conditions. Radar data are less likely to be affected by cloud cover, but are subjective to the problems of low resolution,

...

Remote sensing offers an efficient and reliable means of
collecting the information required, in order to map crop
type and acreage. Besides providing a synoptic view, remote
sensing can provide structure information about the health
of the vegetation.

~~Multiple classifier combination for crop types phenology ...~~

Timely and efficient land-cover mapping is of high interest, especially in agricultural landscapes. Classification based on satellite images over the season, while important for cropland monitoring, remains challenging in subtropical agricultural areas due to the high diversity of management systems and seasonal cloud [...]

~~Remote Sensing | Special Issue : High Resolution Image ...~~

Satellite imagery combined with ground-based data and spatial mapping tools can make an enormous difference to

Acces PDF Efficient Crop Type Mapping Based On Remote Sensing In The

agricultural decision making at global, national, and local levels, by providing more timely and accurate information. Moreover, crop-type information is a critical input to cropping system models or integrated assessment models.

~~Special Issue "Remote Sensing for Crop Mapping"~~

Crop-type maps are often derived by the supervised classification of satellite imagery using machine learning models. The choice of data sampled during the data collection phase of building a classification model has a tremendous impact on a model's performance, and is usually collected via roadside surveys throughout the area of interest.

~~All pixels are useful, but some are more useful: Efficient ...~~

Many applied problems arising in agricultural monitoring and food security require reliable crop maps at national or global scale. Large scale crop mapping requires processing and management of large amount of heterogeneous satellite imagery acquired by various sensors that consequently leads to a “ Big Data ” problem. The main objective of this study is to explore efficiency of using the ...
