Most likely, the emerging network architecture will be a mix, using both the centralized and the small-cell structures. Centralized servers will connect to remote radio heads in areas with established and unobstructed coverage, while small cells will be deployed in coverage shadows and areas that need expanded coverage, but don't yet require a centralized

...

Wireless Network-on-Chip (WiNoC) represents a promising emerging communication technology for addressing the scalability limitations of future manycore architectures. In a WiNoC, high-latency and power-hungry long-range multi-hop communications can be realized by performance- and energy-efficient single-hop wireless communications.
